

Protect lives with Walabot HOME

- No cameras
 - No wearables
 - No buttons
 - No worries
- Just fall detection at its best.

Falls are common and bring serious health issues

11 seconds

Is how often an adult over 65 in America is treated in an emergency room for a fall.

\$30,000

Is the average financial cost of just one single fall for a senior citizen.

6 months

The maximum lifespan for the 1 in 4 elderly people who fall and sustain a hip fracture. A quarter of all falls.

50%

Is the amount of people who exclude social or physical activities after a fall because of the psychological toll.

90%

Is the amount of seniors who are able to return to their homes after receiving help within an hour of a fall.

With no big buttons
to push or pendants
to be worn around
the neck.

Walabot HOME is the
next generation of fall-detection.
And four times more accurate
than all other existing solutions.

Unique

Walabot HOME is the number-one remote fall detection device. It's not a wearable or a camera, and doesn't require a button to be pressed in the case of an emergency.

Simple

Designed for effortless use, Walabot HOME requires no maintenance or interaction.

Once set up, the device will actively monitor the room, and you within it.

Smart

Walabot HOME uses 3D-radar-imaging technology to automatically monitor you and keep you safe. Even in the dark. And even if you're unable to move.

Or wrist-worn
devices that can
fall off, break, be
forgotten, or don't
recognize a fall.

Walabot HOME
reduces harm
by immediately
detecting falls.

The world's first
fully automatic
fall-detection service,
at your service.

Reliable

Walabot HOME is powered by the world's most advanced radio frequency sensor technology. Vayyar technology is so accurate that it can detect 99% of falls. That's four times more reliable than the leading competitor.

Immediate

When Walabot HOME detects a fall, it immediately notifies an emergency contact. The sooner help arrives, the faster treatment can be administered and the quicker you can return home.

Then automatically
calling for help
wherever that may be
within seconds.

Automatic

In the event of a fall, a two way voice call is activated so you can speak with your care-giver and tell them what has happened, even if you cannot move.

Bedroom

Kitchen

A Walabot HOME
in every room, for
all-round protection.

We know that up to
80% of all falls happen
in the bathroom.
But what about the
other 20%?

Or your bedroom. A room that's often dark when you rise from it, or you're tired when you retire to it.

So whether you're warming up a meal, taking a shower, carrying a hot drink, or for those moments in the middle of the night, Walabot HOME can watch out for you, everywhere.

Well, don't worry. For complete peace of mind, you can install a Walabot HOME in every other room of your home too.

From the minute you get up, to the time you turn in. Walabot HOME is there for you.

Like your kitchen. Where splashes from the sink can make the floor wet and slippery.

Your lounge. Where something as harmless as a rug can become a nasty trip hazard.

Bathroom

Living room

How Walabot HOME can positively affect you

Respects privacy

With the increased need for assistance, people who are aging should not compromise privacy.

Vayyar radio frequency sensor technology uses no optics or cameras, maintaining privacy across your home.

Maintains dignity

Unobtrusive monitoring allows you to continue functioning in your daily life with as much independence as possible.

Your sense of self and well-being is maintained while caregivers can feel secure that you're safe and well.

Restores confidence

Falls and related injuries can have a dramatic impact on your confidence.

People often reduce their activities and social contact as a result. Sometimes more dramatically than the physical injury itself.

Actively monitors

Walabot HOME is always on and always at work. Monitoring the surroundings and analyses the results in real time. So that it can provide immediate assistance if there is any kind of fall or health deterioration.

*This is an approximation of how Walabot HOME's 'point-cloud' imaging technology sees you.

Your well-being is always our concern

Safety

Your safety is our concern and so not only are we constantly monitoring your health but we also ensure that our device meets all of the necessary compliance standards.

Approved by the Federal Communications Commission (FCC), Walabot HOME emits monitoring waves 1,000 times weaker than an average smartphone or Wi-Fi device making it a completely safe addition to your home appliances.

Privacy

No camera means your privacy is always protected. Instead of collecting optic data, Walabot HOME's sensors capture a general outline of your location and position. This ensures that your identity and personal information is never recorded and removes any fear of a security breach.

Walabot HOME also works in a wide range of conditions that cameras cannot, including steam and darkness, and can sense through objects like curtains and glass walls.

What our customers say

Perfect peace of mind

"Easy installation, my Walabot HOME blends with the decor of my bathroom so I don't even notice it's there. Brings me peace of mind that if something happens to mom upstairs, I'll be aware of it immediately."

Joe H.

A Great Alternative

"I recently installed Walabot HOME for my mother who had previously tried pendants. She was very frustrated with the idea of having to wear a pendant, and so this device is a great alternative."

Evelyn.

Made me Feel Safe

"I was worried about falling due to my medical condition. I installed Walabot HOME in my bathroom and was pleasantly surprised by how easy the setup was and how safe it has made me feel!"

Andrew S.

Welcome addition to our home

"Installed Walabot HOME in my mother's bathroom. We did not have any falls since it was installed, and hopefully won't, but I'm very glad it is there, it reassures me."

Gene R.

Your questions. Answered.

"What if I lie on my bed?"

Don't worry. Walabot HOME's smart-sensor technology recognizes the difference between you lying on your bed and falling on the floor.

"What if I sit on the toilet?"

Don't worry. Sit or stand as normal. Walabot HOME uses advanced learning software to continuously familiarize itself with you and your surroundings to keep you safe.

"What if I can't reach the unit?"

Don't worry. Walabot HOME doesn't need you to press any buttons. If you can't move, the device will automatically call your caregiver and open its speaker phone.

"What if the room is dark?"

Don't worry. The technology is based on radio waves, not cameras. And works under any lighting conditions.

"Is the device safe?"

The device meets all compliance standards, is FCC approved, and 1,000 times weaker than a smartphone or Wi-Fi device.
